CARO by SPHERITY

Looking to simplify your DSCSA compliance?
Get your ATP Credential today.

Introducing a new layer of security, efficiency, and convenience to your DSCSA compliance.

Your DSCSA compliance. Simplified. Automated.

Avoid manual processes and errors through automated ATP checks and auditable record-keeping in all VRS-enabled Product Verifications. Validate in real-time if your counterpary is an Authorized Trading Partner (ATP).

Readily integrated with your solution provider

Align with existing operational processes without disruption thanks to direct integration with your Verification Router Service (VRS). Facilitate DSCSA-compliant electronic Product Identifier (PI) messages in your existing system.

CARO exists within an industry ecosystem

SAP, tracelink (Network for Greater Good), RFXCEL (Antares Vision Group), TrackTrace RX (Traceability), Movilitas Cloud, SYSTECH (connected solutions by Markem-Imaje), RxScan, JEKSON Vision, LSPedia, Trust.med, axway, CardinalHealth, OPTEL, NAVITAS Life Sciences

CARO by SPHERITY

Verify in real-time your Authorized Trading Partners (ATP). No additional IT integration required.

An award-winning partnership

Legisym, a leading expert in credentialing and license management technology is Spherity's close partner. All CARO users receive Legisym-issued credentials and associated monitoring services under a single contract.

Assurance when EPCIS data exchange fails

Worried about urgent dispensing needs being blocked by failed or missing EPCIS data exchange?

Using a PI Verification that includes ATP credentials as part of your 'will you use the item' decision tree will provide assurance about product origin even if you have not received valid EPCIS data yet.

> We were able to increase our level of compliance with DSCSA. All I had to do was sign up with Spherity and tell my VRS that I want to use credentialing. I encourage all trading partners to add credentialing to their roadmap for compliance.
